EDUCATION

Bachelor of Computer Applications (BCA)	JSPM University, Pune	2023–2026
		CGPA: 8.49/10
Class XII (HSC)	Maharashtra Board	67%
Class X (SSC)	Maharashtra Board	71.60%

SKILLS

Programming Languages	Java (DSA), Python, JavaScript
Machine Learning	Regression, Classification, Clustering, Feature Engineering, Model Evaluation
Data Science	NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn, Plotly
Web Development	React.js, Node.js, Express.js, MongoDB, MySQL, Flask, HTML, CSS

INTERNSHIP EXPERIENCE

Full Stack Developer Intern – House of CGI	March 2026 – June 2026
---	------------------------

- Optimized website performance through Cloudflare CDN integration, caching strategies, lazy loading, and asset optimization, significantly reducing page load times.
- Developed and maintained full-stack applications using React.js, Node.js, and REST APIs while following modular architecture and clean coding practices.
- Built an automated lead-generation and data collection solution that reduced manual effort by approximately 50% and improved sales team productivity.

PROJECTS

Disaster Helper – Disaster Management Platform <i>JavaScript</i>	<i>(Node.js, MongoDB, HTML, CSS,</i> Live Demo — GitHub
--	--

- Developed a disaster management platform enabling volunteers, victims, and coordinators to communicate and manage relief operations efficiently.
- Implemented secure authentication, SOS alert generation, and resource tracking using Node.js and MongoDB.
- Designed responsive interfaces and backend services to support real-time disaster response workflows.

Flash IDE – AI-Powered Code Editor <i>(React.js, Node.js, Gemini API)</i>	Live Demo — GitHub
--	--

- Built an AI-powered code editor using React.js, Node.js, and Google Gemini API for intelligent code generation and programming assistance.
- Integrated AI-based code completion and debugging support, reducing development time for users.
- Designed a scalable architecture supporting real-time interactions between frontend, backend, and AI services.

LodgeStay – Property Rental Platform <i>JavaScript</i>	<i>(Node.js, MongoDB, Cloudinary, HTML, CSS,</i> Live Demo — GitHub
--	--

- Developed a property rental platform allowing users to discover, list, and manage rental properties.
- Implemented authentication, authorization, image uploads via Cloudinary, and role-based access control.
- Designed REST APIs and database schemas to efficiently manage property listings and user interactions.
